## New Year's OVI Crash Forecasts\*

From 2001 to 2005, there were 57 fatalities (average of 11 per year) and 3,361 injuries (average of 672 per year) resulting from traffic crashes over the New Year Holiday period in Ohio. Over half of the fatalities (54%) and one in five injuries (20%) resulted from alcohol-related crashes. The figures below provide general statewide forecasts for fatal and injury OVI crash rates by time of day. Projected rates are for Interstate, US, and State Routes.

- As the last working day before a long holiday weekend, crash rates on December 29 are predicted to be different from non-holiday Fridays.
- The highest crash risk will be in the early morning hours, but it will not be as high as on a non-holiday Friday.
- Crash risk decreases through the middle of the day, then increases again in the evening.

- Crash patterns for Saturday and Sunday of New Year's weekend are projected to be the same as for non-holiday weekends.
- Like Friday Dec. 29, crash rates are expected to be highest in the early morning hours; however, the weekend crash risk is substantially higher than for Friday.

- Compared to a non-holiday Monday, the OVI crash risk on January 1 is higher throughout most of the day.
- The early morning crash risk is substantially higher than for a typical Monday.
- Compared to the rest of the holiday period (the preceding Friday, Saturday, and Sunday), Monday Jan. 1 poses the lowest overall OVI crash risk.

The following pages present the top 20% of OVI at-risk roadways for Friday (Dec. 29, 2006), Saturday and Sunday (Dec. 30-31, 2006), and Monday (Jan. 1, 2007). Scroll down or click on a link below to view results by District:
